

Sprint 1 Report

SlugSync

Due: 4/23/24

Actions to stop doing:

- The team could attempt to keep meetings and scrum sessions on track concerning the development of the product.
- Besides the above, we are generally satisfied with the performance of our group since we paced development well and adhered to weekly Scrum and Agile practices.

Actions to start doing:

- We can better structure our meetings so that we work efficiently during group meetings and complete tasks such as sprint planning in a focused manner.
- Attend TA meetings in person (as requested by TA) so we can be more involved in the weekly TA meetings.
- Allocate time in weekly meetings to learn and ask for help from team members with respect to development and the tech architecture.
 - 12:30pm - 1:30pm group coding on Friday after TA meeting
- More team members could participate in the code review process so that all team members understand updates in the codebase. These code reviews could also take place in a synchronous session (on Discord/In person) so that team members can get instant feedback or ask clarifying questions if needed.
- Definition of approval for merge requests
 - Git checking out the branch locally
 - Verifying the UI
 - Running unit and e2e tests
 - Ensure code 100% code coverage and all tests pass
 - All gitlab threads / comments resolved
 - Linter runs and passes

Actions to keep doing:

- Maintain current workflow and development organization in platforms like GitLab, Jira, and Discord.
- Continue to communicate with team members and hold regular meetings to keep up with developments
- Continue keeping Scrum meetings under 15 minutes

Work completed

- Infrastructure and project setup (database, backend, frontend)
- Home Page
- Sign In and Login page
- Create Goal Page
- View Goal Page
- 100% coverage in tests

Not completed

- Testing for login frontend + e2e

Work completion rate

- 95%
